

POND MOUNTS

LTLT lights are designed to use underwater and have the highest rating for use underwater (IP 68). This means the light can be positioned or fixed in ponds, streams, under piers or water features in a variety of ways. Instead of drilling spikes into the pond wall or floor for stability, which are likely to damage water proofing, we recommend the use of Pond Plates. All pond plates are made of thick and heavy 316 Marine Grade Stainless Steel. The weight of the pond lights give the pond light stability, and are easy to move. Stainless or Copper spikes are recommended for mounting lights on pond plates. The “Bondi Barrel” light fits onto the pond plates.

	NAME	CODE	DIMENSION		APPLICATION
	Small Pond Plate	AMPPS	L	100 mm	Part fits the spikes of an LTLT “Bondi Barrel” to use under water. The pond plate acts as a weight and gives the light stability. 3 sizes available.
			W	50 mm	
			D	10 mm	
	Large Pond Plate	AMPPL	L	100 mm	
			W	50-100 mm	
			D	10 mm	
	Flat Pond Plate	AMPPF	L	150 mm	
			W	150 mm	
			D	5 mm
